

Shortcut	Action
Double Shift	<u>Search Everywhere</u> Find anything related to IntelliJ IDEA or your project and open it, execute it, or jump to it.
Ctrl+Shift+A	<u>Find Action</u> Find a command and execute it, open a tool window or search for a setting.
Double Ctrl	<u>Run Anything</u> Execute commands, such as opening a project, launching a run/debug configuration, running a command-line utility, and so on. The available commands depend on the set of plugins and tools you have configured for your project.
Alt+Enter	<u>Show intention actions and quick-fixes</u> Fix highlighted error or warning, improve or optimize a code construct.
F2 Shift+F2	<u>Navigate between code issues</u> Jump to the next or previous highlighted error.
Ctrl+E	<u>View recent files</u> Select a recently opened file from the list.
Ctrl+Shift+Enter	<u>Complete current statement</u> Insert any necessary trailing symbols and put the caret where you can start typing the next statement.
Shift+Alt+L	<u>Reformat code</u> Reformat the whole file or the selected fragment according to the current code style settings.

IntelliJ Keyboard Shortcuts - Linux

Shortcut	Action
Ctrl+Shift+Alt+T	<u>Invoke refactoring</u> Refactor the element under the caret, for example, safe delete, copy, move, rename, and so on.
Ctrl+W Ctrl+Shift+W	<u>Extend or shrink selection</u> Increase or decrease the scope of selection according to specific code constructs.
Ctrl+/ Ctrl+Shift+/ Ctrl+B	<u>Add/remove line or block comment</u> Comment out a line or block of code. <u>Go to declaration</u> Navigate to the initial declaration of the instantiated class, called method, or field.
Shift+Alt+7	<u>Find usages</u> Show all places where a code element is used across your project.
Alt+1	Focus the Project tool window
Escape	Focus the editor
